Summary

.NET Backend Developer with 4 years building production-grade messaging infrastructure at Iran's leading SMS platform. I design and ship REST APIs and microservices using C#, ASP.NET Core, Clean Architecture, and event-driven patterns — with a focus on observability, maintainability, and reliability at scale. Open-source maintainer of the official SMS.ir .NET SDK and a Go-based CLI tool for the SMS.ir API.

Experience

.NET Backend Developer

May 2022 – Present (~4 yrs)

SMS.ir (IPE)

Tehran, Iran

- Architected RESTful APIs and MediatR CQRS handlers for bulk SMS, P2P messaging, scheduled and A/B campaigns, and inbound SMS — the public Developer API platform handled 8M+ requests/day from external integrators.
- Designed and implemented the developer sandbox after benchmarking design options and team review: SQL database replication/migration tooling between servers, plan-based user access control, an FAQ module with similarity search, a reporting service combining Elasticsearch and SQL, and a bridge service migrating users from the legacy SMS.ir panel to the new panel.
- Redesigned and rewrote the business data archive service (Hangfire-based jobs), eliminating recurring job timeouts and cutting processing time to under 5 minutes.
- Improved search performance on high-transaction datasets in the core SMS.ir platform, resolved a memory leak, and reduced application startup time.
- Built invoicing service with automated Sepidar ERP synchronization and integrated payment gateways like Parbad for billing operations.
- Implemented integrations with multiple Iranian operators (SMS carriers) via their HTTP APIs as part of the core message dispatch layer.
- Conducted code reviews for junior developers; reviewed pre-publish changes for Clean Architecture and SOLID compliance.
- Worked in 2-week Agile/Scrum sprints (Jira, Trello, Plane); larger features were planned and delivered incrementally across multiple sprints, with contributions to planning, estimation, and reporting.
- **Open Source:** Maintainer of [SmsPanelV2.DotNet](#) (10+ stars) and [SmsPanelV2.DotNetFramework](#) — the official .NET SDKs for the SMS.ir API. Author of [smsir-cli](#) (14 stars), a Go-based CLI for the SMS.ir API.

.NET Developer (Part-time, Remote)

Jan 2025 – Jun 2025

Universe AI

Canada

- Integrated ASP.NET Core backend with an AI-powered health platform, connecting REST APIs to ML model endpoints.
- Evaluated Semantic Kernel and Microsoft.Extensions.AI to define the team's .NET AI integration architecture for LLM connectivity.

Teaching Assistant — Database Systems

Feb 2024 – Jun 2024

Damghan University

Damghan, Iran

- Held office hours and reviewed group projects for 40+ students covering SQL Server, T-SQL optimization, relational design, and normalization.

.NET Developer (Bootcamp / Internship)

Oct 2021 – Jan 2022

MAPSA HR and Training

Tehran, Iran

- Completed a 3-month ASP.NET Core program: OOP, EF Core, SQL Server, MVC, Repository pattern, and ASP.NET Core Identity.

Skills

- **Languages & Frameworks:** C#, ASP.NET Core, .NET 8, .NET Framework, REST API, MVC, SignalR, Fluent-Validation
- **Architecture & Patterns:** Microservices, Clean Architecture, DDD, CQRS, MediatR, SOLID, Repository Pattern, Event-Driven Architecture
- **Data:** SQL Server, T-SQL, Entity Framework Core (EF Core), Dapper, Redis, MongoDB, Elasticsearch
- **Messaging & Jobs:** Hangfire, Message Queues, RabbitMQ (familiarity)
- **DevOps & CI/CD:** Docker, GitLab CI (familiarity)
- **Observability & Testing:** ELK Stack, Serilog/Seq, JMeter, Postman, xUnit, Moq
- **Workflow:** Agile, Scrum, Jira, Trello, Plane, Code Review, Git

Education

Bachelor of Engineering (BE) — Computer Software Engineering

Damghan University — Oct 2020 – Sep 2025 — Damghan, Iran
